DOUBLE HINGED DOOR SET WITH FIXED SIDE SCREENS &
OVER PANEL
HARPENDEN, HERTFORDSHIRE

LEAD TIME:
5 WEEKS

PROJECT VALUE:
£5,250 + VAT

Design.

The client of our Harpenden project was originally exploring his options and considering the implementation of aluminium doors within his property. After speaking through the options with ourselves and the other company that he was considering he opted to use our slimline InoCross20 doors. The use of our steel doors instead of aluminium meant that the framework was significantly thinner, maximising the area of glass, and creating an open and airy feel when the doors are both open and shut. With all of our InoCross20 doors being internally welded, this meant that there were no joints visible in the frame or Cross Bars, providing a seamless and sophisticated result.

From the offset the client was certain that he wanted his doors to be finished in RAL 7016, Anthracite Grey. This was due to his door set being situated in the same sightline as the external sliding doors to the rear of his property.

To create an element of symmetry throughout the property we suggested producing the doors to the same height of the internal wooden doors, adding an over panel to the head to allow the maximum amount of light to flow in from the sliding doors and skylight.

Given the modern, contemporary aesthetic of the clients property he chose to complete his doors with our Trim handle. Measuring just 250mm x 30mm our Trim handle is neatly welded to the door frame, offering an ultra minimalistic finish, compromising nothing to functionality.

From our initial conversation with the client we were certain that our InoCross20 Double Door Set would be the perfect solution for his space.

BEFORE

AFTER

We provided an ideal solution for our client's rear living room, which is located in the centre of the property and lacks direct access to natural light through external windows. To address this challenge, we recommended the installation of our InoCross20 Double Doors with Fixed Side Screens and Over Panel. These doors are specifically designed to maximise the entry of natural light into the room.

Our InoCross20 Double Doors feature an impressively slim profile, with a framework measuring just 20mm. Additionally, the bead and Cross Bar of these doors are a mere 15mm in thickness. This innovative design ensures that the rear living room is flooded with ample natural light, as the doors allow an abundance of sunlight to enter from the rear of the property.

By choosing our InoCross20 Double Doors with Fixed Side Screens and Over Panel, our client can now enjoy a bright and well-illuminated living space, transforming the rear of their property into a welcoming and light-filled area.

Our client had a clear vision for their interior design and sought to create a seamless aesthetic throughout their home. To achieve this, they decided to order internal steel doors in RAL7016, matching the colour of their external sliding doors. This careful coordination allowed for a consistent and harmonious transition between the interior and exterior spaces, enhancing the overall visual appeal of the property.

Taking their attention to detail a step further, our client decided to extend this colour scheme to their dining room table. They ingeniously painted the legs of their table to match the RAL 7016 shade, creating a cohesive and unified look. This small but impactful customisation added a touch of sophistication and individuality to their dining area, further enhancing the overall ambiance of their home. By integrating these subtle design choices, our client achieved a cohesive and visually striking interior that truly reflects their personal style.

In order to maintain consistency in the height of doors throughout the property, our client opted for the use of an over panel on their glass steel internal doors. By incorporating an over panel, they were able to achieve a uniform appearance in line with the other doors in their home. This clever design choice ensured that all the doors, including the glass steel internal doors, shared the same height, creating a visually pleasing and balanced look.

The over panel seamlessly extended the height of the doors while maintaining the overall aesthetic integrity of the property. This attention to detail highlights our client's commitment to a cohesive and well-designed interior space, where every element is carefully considered for a harmonious and unified result.

CLIENTS COMMENT.

"Fantastic quality steel doors from a team that cares! Was shopping around for a company to provide us with bespoke steel doors for a non-standard opening in our ground floor renovation. Stumbled upon Joshua James and the guys were fantastic to deal with. Made excellent recommendations on design, the price was fair, the quality is brilliant and they kept to their word at all stages - measuring up, manufacturing, installation, time-scales etc. I would have absolutely no hesitation recommending these guys to any of my friends and family."
